Date when started:	Jan 2007
Country of Origin:	Uganda
Institution:	Makerere University
Department:	ICT support

Research Interest

Information Systems with a focus on Financial Management Systems

A Financial Management System (FMS) is a system that records and maintains financial records for organisations for purpose of processing and generating financial Reports.

These include:

General Ledger, Accounts Receivables/Payables, Bank Reconciliation statements, e.t.c.

Objectives

To develop a structure/framework that spells out requirements for designing financial systems. The structure/framework is to specifically address the issues of:

1. Database design requirements for data and various parameters
2. Tools and necessary codes for application development.

Scope

Determine requirements and techniques of designing financial management systems. This is to include:

1. Investigations about designing and establishing appropriate databases
2. Determining and developing necessary modules for automating various functions.
3. Determining requirements for accounts operations for various types of organisations.

Research Plans

Currently working on Proposal. Expect to complete it by end of June 2007

Not possible to specify concrete research plan because:

- Proposal is not yet complete and approved
- Periods when more courses are required to attend are not yet specified

However in general the plan is to spend 6 months in Sweden and 6 months in Uganda each year for the period of 4 years.

On-going Research

Working on Proposal expect to complete it by end of June 2007

Currently doing courses which have to earn me 60 credit points that have to be done in course work out of the total of 160 credit units.

The background is a solid blue color. A white curved line starts from the top left and curves towards the center. A dark blue curved shape is positioned in the lower right quadrant, overlapping the white line.

END

Thank You
